Top 10 Green Meeting Apps

MeetingApps.com was developed by Kirsten Strand, BSc, CITE, CMM, as an industry specific app directory, app development service and a resource for additional planner needs. Working alongside Joseph Lo, they named their top 10 green apps.

- **Seafood Watch.** Stay on top of which restaurants and caterers are sourcing ocean-friendly seafood and sushi. Planners can use detailed information to make educated and environmentally sound decisions.
- **Green Travel Choice.** How large is the carbon footprint of your group travel? Find out with a GPS-based map that calculates CO2 emissions from a wide variety of transportation options.
- **GoodGuide.** Using a database of 17,000 products, app users scan barcodes to reveal if they are purchasing safe, healthy, green and socially responsible items.
- **Green Tips!** Making it easy to be green, this app generates a new tip each time it is opened and then saves it to a list for future reference.
- **Route4Me.** Find the most direct route to your destination through Route4Me. It gathers your destinations and helps you find the optimal route, saving planners money in the long run.
- **SoundNote.** This app allows the user to take both typed and audio notes with ease. For simple playback, tap a word and the recording will find that exact spot.
- **Bamboo Paper.** Create virtual notebooks for your iPad, turning it into a paperless communication tool that's great for meetings.
- **Bump.** Exchange anything from contact information to photos by bumping two phones together. This app works well between any Droid or iPhone.
- **Conference CO2 Calculator.** Keep the air clean with an app that calculates CO2 emissions from your conference attendees and pinpoints a less impactful location.
- **Green Globe.** Entertain and house guests the green way by finding sustainable resorts, hotels, conference centers, attractions and activities through Green Globe.
